Nomenclature

F	N	H	S	04	H	2	03
Model	Vintage	Motor	Width	Fans	Tube Diameter	Number of Rows	Coil Slab
F = Fluid Cooler		H = 1140 RPM 1.5 HP	S = Single	01 - 12 Fans	H = 1/2"		
		L = 830 RPM 1.5 HP	D = Double		F = 5/8"		
		Q = 540 RPM 0.5 HP					
		E = VSEC Motor					

Overview

Our engineers have carefully selected and matched components on the FN fluid coolers to provide excellent performance, long service life and a wide range of performance selections. The FN fluid coolers are specifically engineered for outdoor installations.

FN fluid coolers are available in a wide range of sizes. In addition, the FN series feature multiple motor options to provide reduced sound and energy consumption options. Each model is available with several circuit options to ensure the exact fluid cooler for your requirements. FN fluid coolers are designed to reduce the installation and maintenance costs. Each unit is completely assembled and tested at the factory.

FNH, FNL and FNQ Standard Features

- Chandler fluid coils incorporate the latest advancements in coil technology to provide maximum capacity.
- Coils available in 1/2" for high heat transfer or 5/8" tube diameters for low pressure drop applications (see model availability).
- All FN models feature design elements to help eliminate leaks at the tube sheet. All 1/2" models incorporate the Floating Tube coil design.
- All 5/8" models incorporate bushing plates allowing for coil expansion and contraction. Coils feature a 5 yr. warranty against fluid leaks caused by tube contact at end and center coil support sheets.
- Coils are fabricated with corrugated aluminum fins (10 FPI) with staggered copper tubes for optimum heat transfer. All coils are pressure tested prior to shipment.
- Galvanized steel housing for corrosion protection.
- Fully baffled fan sections provide structural strength and prevent fan wind milling in the off cycle.
- Direct drive motors in 1140 (FNH), 830 (FNL) or 540 RPM (FNQ).
- Energy efficient, three phase fan motors with ball bearings and internal overload protection.

ServiceEase™ Motor Mount System

Larkin's Patented QuietEdge™ Fan Blade for Improved Sound Performance

FNH, FNL and FNQ Standard Features (cont.)

- Patented (#7,210,661) ServiceEase motor mount feature allows for ease of motor service and reduces likelihood of damage to the coils during service.
- Statically and dynamically balanced fan blades are aluminum and riveted to coated steel spider and hubs.
- FNL and FNQ series units feature the patented QuietEdge fan blade providing an unprecedented reduction in sound levels.
- Powder coated fan guards for optimum corrosion protection.
- Weatherproof control panel with factory mounted door interrupt disconnect switch.
- UL and UL listed for Canada.
- 2 year warranty on unit.

FNH, FNL and FNQ Available Options

- Alternate coil construction including polyester coated fins, copper fins and epoxy or phenolic coated coils
- Aluminum or painted galvanized steel housing
- Optional coil fin spacing of 8, 12 or 14 FPI
- High temperature motors suitable for 185°F air temperature (FNH series only)
- Totally enclosed fan motors (FNH series only)
- Hinged fan panels for ease of servicing and cleaning
- Side access panels for ease of servicing and cleaning
- Extended condenser legs for increased ground clearance (30", 36" and 42")
- Fused disconnect switch (available for units with a MOPD below 60 A)
- Fan cycling control panel (cycles all fans based on leaving water temperature)
- Motor Contactors [Individual or Paired (double row units only)]
- Motor Fuses [Individual or Paired (double row units only)]
- Motor Circuit Breakers [Individual or Paired (double row units only)]
- Motor Terminal Boards [Individual or Paired (double row units only)]
- Fan control switches
- 24V and 115V control circuits
- Factory mounted and wired control transformer
- Sealtite® wiring from motors to electrical box
- Threaded connections (MPT)
- Flange connections
- Connection manifold (Shipped loose – not available with threaded or flanged connections)
- Unit frame

FNE Standard Features

- VSEC motor, swept fan blade and venturi incorporating integrated variable speed technology. Motor includes inherent locked rotor, under voltage and phase loss protection.
- 3 yr. warranty on motor.
- Larkin fluid coils incorporate the latest advancements in coil technology to provide maximum capacity.
- Coils available in 1/2" for high heat transfer or 5/8" tube diameters for low pressure drop applications (see model availability).
- All FN models feature design elements to help eliminate leaks at the tube sheet. All 1/2" models incorporate the Floating Tube coil design. All 5/8" models incorporate bushing plates allowing for coil expansion and contraction. Coils feature a 5 yr. warranty against fluid leaks caused by tube contact at end and center coil support sheets.
- Coils are fabricated with corrugated aluminum fins (10 FPI) with staggered copper tubes for optimum heat transfer. All coils are pressure tested prior to shipment.
- Aluminum housing for corrosion protection.
- Side access panels for ease of servicing and cleaning.
- Fully baffled fan sections provide structural strength and prevent fan wind milling in the off cycle.
- Weatherproof control panel with factory mounted door interrupt disconnect switch.
- UL and UL listed for Canada.
- 2 year warranty on unit.

FNE Available Options

- Alternate coil construction including polyester coated fins, copper fins and epoxy or phenolic coated coils
- Galvanized or painted galvanized steel housing with access panels
- Optional coil fin spacing of 8, 12 or 14 FPI
- Extended condenser legs for increased ground clearance (30", 36" and 42")
- Fused disconnect switch (available for units with a MOPD below 60 A)
- Fan cycling control panel (based on leaving water temperature)
- Motor Fuses [Individual or Paired (double row units only)]
- Motor Circuit Breakers [Individual or Paired (double row units only)]
- Motor Terminal Boards [Individual or Paired (double row units only)]
- Threaded connections (MPT)
- Flange connections
- Connection manifold (Shipped loose – not available with threaded or flanged connections)
- Unit frame

FNH, FNL and FNQ Series

Optional fan cycling control panels are available to cycle fans on leaving fluid temperature.

- All fans are cycled with contactors.
- Fluid Coolers with a single row of fans cycle fans separately. Control panel is supplied with one electronic thermostat and contactor per fan.
- Fluid Coolers with two rows of fans cycle fans in pairs. Control panels are available standard with one thermostat and contactor per pair of fans. Optionally, individual fan contactors can be provided instead of paired fan contactors.
- Standard control circuit is 240 volts. Control circuits with 24 or 115 volts are available on request.
- Standard control circuits require an external power supply for powering control circuit (by others).
Optional control circuit transformer is available factory mounted to provide power to the control circuit.
- Custom control panels are available. Please consult your sales representative or account engineer for assistance.

FNE Series

Fan speed control panels are available to vary the fan motor speed.

- Standard units require customer supplied signal for fan speed control. Standard control signal is 0 to 10V DC. Alternate control signal methods are available. Please consult your sales representative or account engineer for assistance.
- Optional fan speed control panel consisting of an electronic thermostat and speed controller is available to supply necessary control signal.
- Custom control panels are available. Please consult your sales representative or account engineer for assistance.
